Tiled solar installation

Overview

Can solar panels be installed on a tiled roof?

Solar panels can be installed on a tiled roof in three ways: by installing solar tiles directly onto the roof or by attaching panels using mounting brackets. Most people install solar systems on their existing houses ('retrofit') using this method.

How do I install solar panels on a lightweight tile roof?

The best way to install solar panels on a lightweight tile roof is through a method called inset solar installation, also known as a “comp-out” installation. This technique removes the section of tile where the solar panels will be installed and replaces it with composite shingles before mounting the solar array.

What is the new way to replace tiles for solar installation?

The new, better way: Double-flashed tile replacements that perfectly fit in place of a single tile. Replacing small sections of tile with composite shingles, installing mounts meant for composite shingle roofs, and placing dummy tiles over the holes. Cutting or drilling into tiles to attach hooks under them that support solar racks.

Can a solid Solar Installer install concrete tiles?

For concrete tile roofs, a solar installer can install solar panels. They will temporarily remove just a few tiles, install base plates onto the roof membrane, and attach special hooks to them.
