# **120-foot energy storage container for Iceland tunnels**

## Overview

---

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What energy storage container solutions does SCU offer?

SCU provides 500kwh to 2mwh energy storage container solutions. Power up your business with reliable energy solutions. Say goodbye to high energy costs and hello to smarter solutions with us.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

How does energy tunnel work?

Energy tunnel is thermally activated through embedding absorber pipes within the tunnel lining, where the underground heat is extracted and transferred above the ground via a heat pump for building energy applications. Energy tunnel offers advantages such as low carbon emissions, cleanliness, high efficiency, and safety.
