Astana Folding Container Low-Pressure Type

 Extreme Light Weight

 X3 Extended Cycle life

 Low Self Discharge

 Superior Cranking Power

 Completely Sealed

 Environmental

Overview

What is a 'named cargo container'?

DIN EN ISO of January 1996 specifies under Code S and group code SN "named cargo containers". Examples of these include containers for transporting livestock (type code S0), containers for transporting automobiles (type code S1) and containers for transporting live fish (type code S2).

What are open sided containers?

Open-sided containers (OS) have solid end walls and a solid roof panel. The sides may be closed at the bottom by folding down wooden, aluminum profile or steel sheet side walls, which may be divided into sections. Roof bow holders and roof bows are provided for the upper part, which may be covered with tarpaulins.

What is a standard container?

The term standard container was used for the first containers in their basic form. As these were closed and were primarily suitable for the loading of general cargo, they were/are also known as general purpose containers, dry cargo containers or box containers. The initial height of 8' has already very nearly been consigned to history.

What is included in the Hapag-Lloyd container specification booklet?

This container specification booklet provides guidance on the main technical data for Hapag-Lloyd containers, with a focus on dimensions, weights and design features. For further advice or verification of your special transport requirements, please do not hesitate to contact your local Hapag-Lloyd office for assistance.
