

# Battery counter management in shopping malls

## Overview

---

Can submetering reduce shopping mall energy costs?

Submetering of tenants is one of the first recommendations for reducing shopping mall energy costs. This action alone has been shown to result in energy savings of up to 18%. Change tenant mindset using EIG meters and the EnergyPQA.com<sup>®</sup> energy management system to provide energy usage awareness.

Are shopping malls energy efficient?

This results in both immediate and long-term savings. Shopping malls are major energy consumers due to their huge lighting load, large number of shoppers, and long operating hours. Areas often noted to be energy inefficient are common areas, such as entry ways and public restrooms; HVAC systems; and food courts.

What is energy used for in a shopping mall?

d and other shopping centres in EU-28 + NorwaySource: Bointner & Toleikyte, (2014)In shopping malls, energy is primarily used for store lighting, ventilation, heating / air conditioning and food refrigeration.<sup>6</sup> In general, due to the high demand for refrigeration, food-driven stores, such as supermarkets, have significantl.

What control functions are used in shopping malls and hotels?

mportant control functions used in shopping malls and hotels have been listed here. Although most of the HVAC, lighting, hot water and other systems are similar in most commercial buildings such as shopping malls and hotels, what varies are the indi-vidual end use controls which are eith
