

Battery storage for solar panels

Overview

What is solar battery storage?

Solar battery storage isn't just about backup power – it's about energy independence, savings, and resilience. Here's what to keep in mind:

How long do solar batteries last?

The lifespan of solar batteries varies by type: lithium-ion batteries last between 10 to 15 years, AGM batteries last 5 to 7 years, gel batteries last 4 to 7 years, and lead-acid batteries typically last 3 to 5 years. Proper maintenance can help extend these lifespans. Are lithium-ion batteries worth the investment?

.

What are the benefits of a solar battery?

Solar battery benefits can be broken down into three main categories: independence, control, and savings. From distant, off-grid properties to mobile applications and full-home systems, solar batteries can foster energy independence anywhere.

Why do solar panels need battery storage?

Solar panels generate electricity only when the sun is shining, which means that without storage, excess energy generated during the day goes unused or is sent back to the grid. Solar battery storage systems allow users to retain this excess energy and utilize it when needed, improving overall energy efficiency and reliability.
