# **Belgrade low solar glass**

## Overview

---

What is Solarban 72 glass?

Solarban® 72 glass is a triple-silver-coated solar control low-e glass designed specifically for Vitro low-iron glass substrates, Starphire Ultra-Clear® Glass and Acuity® Low-Iron Glass. High VLT. High Performance. Solarban® 72 glass provides high visible light transmittance (VLT), exceptional clarity and superior solar control performance.

What is the longtime solar transmittance of low-E glass?

Longtime solar transmittance The longtime solar transmittance of low-e glass corresponds to the total quantity of the sun's radiant energy which passes through a window in a year. Table 3 shows the results, with the lowest values in red and the highest values in green.

What is low emissivity glass?

In the construction industry, low-emissivity glass is used to improve both thermal efficiency and visual comfort by reflecting or transmitting thermal radiation. The solar optical performances of this type of glass are calculated using the ASTM G173 (AM 1.5) solar spectrum, the unique worldwide standard.

What is the difference between low-E glass and ASTM g173-03 solar spectrum?

Low-e glass with local atmospheric conditions comparison with the ASTM G173-03 solar spectrum. Solar transmittance can vary up to 5% in comparison with the ASTM calculated one. Necessity to include the impact of the local atmospheric conditions on the performances of low-e glass.
