Best solar power station for home Buyer

Overview

Should you buy a power station or solar generator for home backup?

One of the most common reasons people purchase a power station or solar generator for home backup is to ensure everything in their refrigerator stays cool. However, refrigerators have unique power needs compared to other electronics, so it's essential you double-check your unit's requirements before making a final purchase.

What makes a good solar power station?

One of the most important aspects of any solar power station is how well it can interface and charge from various types of solar panels. In some cases, a solar power station might not be able to accept different types of solar panels or may be locked to its own brand's solar panels through a proprietary connection.

Should I buy a solar generator?

If the primary cause of power outages where you live are wildfires or hurricanes, or other summer events, I would recommend looking at solar generators. If the primary cause of power outages where you live are winter storms, then you will likely be better off with a larger power station.

Is a 100W solar power station a good choice?

A new compact power station by an upcoming brand with bigtime battery experience. Our favorite aspect is the fast AC charging combined with >20ms UPS transfer time. The 100W solar charging matches the top brands. Although testing is limited and brand recognition still has a long way to come, this may be a real contender.
