Bidirectional charging of photovoltaic containers at drilling sites

Overview

How can bidirectional charging/discharging a battery achieve maximum PV power utilization?

In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization. All the proposed strategies can be realized by the digital signal processor without adding any additional circuit, component, and communication mechanism.

What is bidirectional power flow control?

Therefore, bidirectional power flow control strategies are proposed to achieve the maximum PV power utilization as well as to realize the hybrid charging methods. In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization.

What is solar-powered bidirectional OBC based on bhgc?

The solar-powered bidirectional OBC based on the coupled-inductor high gain converter with grid-to-vehicle (G2 V) and vehicle-to-grid (V2 G) operations is shown in Fig. 1 and schematic diagram of LEV charging scheme with BHGC is depicted in Fig. 2.

Why should a PV Charger abandon the maximum power point tracking function?

Traditionally, in order to realize these charging strategies, the PV charger should abandon the maximum power point tracking function to maintain the power flow balance. As a result, the output power of the PV array will be decreased.

Bidirectional charging of photovoltaic containers at drilling sites

In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization. All the proposed strategies can be realized by the digital signal processor without adding any additional circuit, component, and communication mechanism.

Therefore, bidirectional power flow control strategies are proposed to achieve the maximum PV power utilization as well as to realize the hybrid charging methods. In addition, with the proposed strategies, the bidirectional charging/discharging capability of the battery is able to achieve the maximum PV power utilization.

The solar-powered bidirectional OBC based on the coupled-inductor high gain converter with grid-to-vehicle (G2 V) and vehicle-to-grid (V2 G) operations is shown in Fig. 1 and schematic diagram of LEV charging scheme with BHGC is depicted in Fig. 2.

Traditionally, in order to realize these charging strategies, the PV charger should abandon the maximum power point tracking function to maintain the power flow balance. As a result, the output power of the PV array will be decreased.

The objective of this article is to propose a photovoltaic (PV) power and energy storage system with bidirectional power flow control and hybrid charging strategies. In order to ...

The Bidirectional Charging project, which began in May 2019, aimed to develop an intelligent bidirectional charging management system and associated EV components to ...

Electric vehicle (EV) charging infrastructure has led to the advancement of grid-tied

photovoltaic (PV) battery energy systems (BES) that support bidirectional energy flow. ...

The DC mains (provided by the AC mains), when presented, powers the down stream load converters and the bidirectional converter which essentially operates in the buck ...

The integration of PV storage, advanced charging infrastructure, and intelligent control systems represents a trans-formative approach to achieving a more sustainable and ...

B. Power-grid Flexibility (Demand-Oriented Transport and E-Charging Solution) This pilot aims to optimize energy usage and enhance grid stability through advanced ...

Bidirectional charging allows for higher use of volatile renewable energies and can accelerate their integration into the power system. When considering these diverse ...

Design and development of a bidirectional high gain converter (BHGC) that can operate efficiently in both Grid-to-Vehicle (G2 V) and Vehicle-to-Grid (V2 G) modes, utilizing ...

This study extends an earlier analysis of rural PV and heat pumps to include an evaluation of the potential for bidirectional EV charging in these areas. Rural China is ...

13 hours ago The second stage reveals the optimized capacity of a photovoltaic (PV) and battery storage integrated hybrid CEVCS at the potential locations.
