## Overview

---

To replace a blown fuse in your home, cut power off from your circuit breaker and unscrew the broken fuse. Then, screw a new fuse of the same amperage into the socket. What happens if you blow a fuse or tripping a breaker?

Blowing a fuse or tripping a circuit breaker is a common issue, especially if you're a multitasker. If you overload a circuit, your system will cut off the electrical flow to prevent your wires from overheating and causing circuit damage or fire. Follow these steps to restore power and get all those appliances going again:.

How do you fix a blown circuit breaker?

First, locate your circuit breaker or fuse box. Depending on the age of your home, you could have either. Once located, turn off the power supply to the affected circuit by flipping the corresponding switch or removing the fuse. Next, remove the blown fuse and replace it with a new one with the same amperage rating.

Can a blown fuse cause a fire?

Unlike circuit breakers, which simply reset after tripping, fuses blow and must be replaced—often at the worst possible moment. A blown fuse can happen due to overloaded circuits, faulty appliances, or short circuits. While replacing a fuse is a simple fix, using the wrong type or size can create a fire hazard.

Can a blown fuse be reset?

Like breakers, fuses protect your electrical system from overloads caused by loose wires, faulty outlets, or too many devices running on the same circuit. However, instead of tripping, a fuse blows or burns out when overloaded. Once this happens, it can't be reset—a blown fuse must be replaced to restore power safely. What Is a Blown Fuse?
