## Overview

What are the settings of a victron inverter?

4.1. AC output voltage and frequency The inverter is set by default at 230Vac. The AC output voltage and frequency can be set to a different value according to below table. 4.2. ECO mode and ECO settings The inverter is equipped with ECO mode. ECO mode is activated via the VictronConnect app.

What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

What happens if the inverter shuts down due to a low battery?

Once the inverter has shut down due to a low battery (regardless of the mode): The inverter will restart again once the battery voltage has increased above the "low battery restart and alarm" level. The inverter will clear the low battery alarm once it detects the battery is being charged. This is the "charge detect" voltage.

When does the inverter restart if a battery is low?

The inverter will restart again once the battery voltage has increased above the "low battery restart and alarm" level. The inverter will clear the low battery alarm once it detects the battery is being charged. This is the "charge detect" voltage. 4.3.1. Dynamic cut off
