Boston Communications Green Base Station Verification

Overview

We design and build a base station certificate (certifying the base station's public key and location) and a multi-factor authentication (making use of the certificate and the information transmitted in the online radio control communications) to secure the authenticity and message integrity of the base station control communications. Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

Why should a base station be able to perform 3GPP conformance testing?

A cost-effective verification that the receiver is able to meet performance requirements under real-world conditions is needed. With the evolution of base stations, it is not only necessary to be able to perform 3GPP conducted conformance testing in a conducted manner, as well as radiated conformance testing over-the-air.

What is base station conformance testing?

The solutions range from high-performance signal generators and signal analyzers to turnkey test systems including shielded chamber environments. Typically, base station conformance testing is performed with a combination of a vector signal generator and a signal and spectrum analyzer.

Why is base station performance important?

Base station (BS) performance is vital for delivering expected quality of experience to end users. To ensure this, it is important that the base station conformance criteria is met and that they fulfill the requirements in the region in which they operate. These criteria are specified by the mobile communication standardization body 3GPP.

NTT DOCOMO has recently announced that it has verified its prototype green base station with dual power-source control technology ...

Energy efficient operation of mobile stations has been investigated since almost two decades because of their limited power sources. On the other hand, cellular network base ...

In essence, 4G/5G Base Station Conformance Testing is a rigorous process involving a series of tests that base stations must pass to be certified for use in live networks.

What is Base Station Testing? In wireless communication networks, base stations or cell towers are evaluated and assessed for ...

==/midnightriders/=This is the 1st thread for /midnightriders/ notables.Re-Posting content from >>>/midnightriders/FULL CREDIT goes to all anons of /midnightriders/, and especially the ...

We show through three example protocols how covert base stations can be used to secure node-centric and infrastructure-centric localization, as well as for localization and ...

Base station (BS) performance is vital for delivering expected quality of experience to end users. To ensure this, it is important that the base station conformance criteria is met and that they ...

Bousia et al. [11] developed a switch base station ON/OFF algorithm green communications, which adequately considered the information of the distance between the ...

In essence, 4G/5G Base Station Conformance Testing is a rigorous process involving a series of tests that base stations must pass ...

What is Base Station Testing? In wireless communication networks, base stations or cell towers are evaluated and assessed for their functionality, performance, and ...

Fake base stations comprise a critical security issue in mobile networking. A fake base station exploits vulnerabilities in the broadcast ...

NEC Corporation today announced that it has completed joint verification trials with NTT DOCOMO, Inc. using Massive Multiple Input Multiple Output (MIMO), a core technology for 5G ...

5G Base Station Manufacturing & Design Verification Test Solutions that offer the lowest nnWave Cost-of-test and smallest industry footprint.

In this paper, a scheme of cell boundary prediction and base station location information verification based on machine learning is proposed, which innovatively introduces ...

Energy efficiency and renewable energy are the main pillars of sustainability and environmental compatibility. This study presents an ...

Boston MBTA Subway The Massachusetts Bay Transportation Authority (MBTA) is a rapid transit operator in Boston, United States. The subway ...

We design and build a base station certificate (certifying the base station's public key and location) and a multi-factor authentication (making use of the certificate and the ...

Energy efficiency and renewable energy are the main pillars of sustainability and environmental compatibility. This study presents an overview of sustainable and green cellular ...

A fake base station is a well-known security issue in mobile networking. The fake base station exploits the vulnerability in the broadcasting message announcing the base ...

The research work of this program design has basically reached the expected requirements, through the user requirements analysis, functional design, database design, ...
