

# Bulk Purchase of 80kWh Solar Container

## Overview

---

What is a 80 kW solar system?

A 80 kW solar system ensures a steady energy supply for your enterprise and decreases or nullifies your electricity bills. We offer complete solar kits and our engineers picked the components so that they fit together nicely. Commercial and industrial scope installations are mostly ground-based.

How much energy does an 80kW Solar System produce per day?

For instance, the amount of energy that a 80kw solar system produce per day in summer California is going to be around 400-480 kWh. However, in New York the same installation is more likely to make only 250-350 kWh per day. The 80kw solar system size will depend on the PV modules that you'll choose.

Can you use an off-grid 80kW Solar System with batteries?

An off-grid 80kw solar system with batteries is a rare sight, but it can be used if you can't connect your system to power lines. Your building will rely only on solar panels during the day and on energy storage at night.

Why should you choose a modular solar power container?

Go big with our modular design for easy additional solar power capacity. Customize your container according to various configurations, power outputs, and storage capacity according to your needs. Lower your environmental impact and achieve sustainability objectives by using clean, renewable solar energy.
