

# Can an inverter without energy storage be used

## Overview

---

Can a solar inverter run without a battery?

In an off-grid setup, batteries are non-negotiable. Without them, you can't store excess solar energy for nighttime use or cloudy days. Running an inverter without battery in this context is simply not feasible. You would lose power the moment solar production drops. Here's why batteries are essential in off-grid inverter systems:.

Can a solar inverter power a business?

For example, a homeowner in Johannesburg with a Afore solar inverter can use solar power directly during the day and pull electricity from the grid at night, without ever needing a battery. Some businesses or facilities only operate during the day — think schools, farms, or manufacturing plants.

Can a solar inverter power your home at night?

This setup allows them to power their homes during the day and rely on the grid at night or during cloudy periods. For example, a homeowner in Johannesburg with a Afore solar inverter can use solar power directly during the day and pull electricity from the grid at night, without ever needing a battery.

What happens if a power inverter goes out without a battery?

If there's a blackout, your inverter without battery will shut down automatically to protect utility workers—a safety protocol called “anti-islanding.” This means that although your panels are capable of producing power, the system will stop delivering electricity during outages unless you have a battery or backup generator in place.
