What is C&I energy storage?

The Industrial and Commercial (C&I) Energy Storage: Construction, Commissioning, and O&M Guide provides a detailed overview of the processes involved in building, commissioning, and maintaining energy storage systems for industrial and commercial applications.

What is a commissioning plan?

Commissioning is a required process in the start-up of an energy storage system. This gives the owner assurance that the system performs as specified. A Commissioning Plan prepared and followed by the project team can enable a straightforward and timely process, ensuring safe and productive operation following handoff.

What is a commissioning process?

Commissioning is a gated series of steps in the project implementation process that demonstrates, measures, or records a spectrum of technical performance and system behaviors. This chapter provides an overview of the commissioning process as well as the logical placement of commissioning within the sequence of design and installation of an ESS.

Do energy storage systems need a safety assessment?

**Safety Assessment:** As more energy storage systems have become operational, new safety features have been mandated through various codes and standards, professional organizations, and learned best practices. The design and commissioning teams need to stay current so that required safety assessments can be performed during commissioning.
