Compact power station factory in Chicago

Overview

Who owns Jackson power plant?

Jackson power plant, also known as the Jackson Generation Energy Center, is a 1.2GW natural gas-fired combined-cycle power plant under construction in Elwood, Illinois, US. J-POWER North America Holdings (J-Power USA), a wholly-owned subsidiary of Electric Power Development Company, is the sole owner and developer of the project.

Where is the Jackson power plant located?

The Jackson power plant is being developed on a 30-acre site at the corner of S. Brandon Road and Noel Road in Elwood, Will County, Illinois, US. The site is in close proximity to the existing electrical transmission lines and gas pipelines. Jackson Generation Energy Center will consist of two combined-cycle generating units of 600MW capacity each.

How efficient is the Jackson power plant?

The turbine has a rated capacity of 425MW and offers 44% efficiency in simple cycle operation, while it offers 614MW plant output with 64.2% plant efficiency in combined-cycle operations. The electricity generated by the Jackson power plant will be fed into the PJM Interconnection.

Will J-Power USA develop a new power plant?

J-Power USA will develop and operate the project through its special purpose company Jackson Generation. Construction on the £795m (\$1bn) project was started in June 2019, while commissioning is expected in April 2022. Jackson is the 11th independent power producer (IPP) project to be developed by J-Power USA in the US.
