Current solar inverter service life

Overview

How long do solar inverters last?

With proper maintenance and regular monitoring, quality solar inverters can serve reliably for 10-15 years, providing optimal energy conversion efficiency throughout their lifespan. Remember that environmental conditions, installation quality, and maintenance practices significantly impact longevity.

When should you replace a solar inverter?

If you have a solar inverter, you may be wondering when you should replace it. There are a few things to keep in mind when making this decision. First, the average lifespan of a solar inverter is about 10 years. This can vary depending on the quality of the inverter and how well it is maintained.

How long do microinverters last?

Microinverters typically showcase impressive longevity, with an average lifespan of 20-25 years, often matching the warranty period of solar panels themselves. This extended durability stems from their distributed architecture, which reduces stress on individual components.

How much does a solar inverter cost?

Budget-wise, set aside approximately 15-20% of your initial solar system cost for inverter replacement. Modern inverters typically cost between €800-€2,000 for residential systems, while commercial installations may require €5,000-€15,000 or more, depending on capacity.
