EU EK energy storage product scale

Overview

What is the European energy inventory storage dataset based on?

Please wait. Disclaimer: The European Energy Inventory Storage dataset is mainly based on public data and data from Wood Mackenzie. Wood Mackenzie Limited, subject to any additional data modifications and/or input provided by the EC or any of its authorised 3rd party contributor.

How does energy storage work in the EU?

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

Which energy storage battery certifications are available in Europe?

Discover the essential energy storage battery certifications in Europe, including CE, IEC 62619, UN38.3, and EN 50549. Ensure your BESS meets EU safety, performance, and grid compliance standards in 2025.

What are the IEC standards for energy storage systems?

The International Electrotechnical Commission (IEC) establishes global safety and performance standards for electrical products, including energy storage systems. Compliance with IEC standards is crucial for accessing the European market and ensuring interoperability and reliability. Key IEC Standards for Energy Storage Systems:
