EU solar glass standards

Overview

When will solar installations be mandatory in Europe?

On Ma, European legislators acceded to the EU Solar Standard in the European Parliament within the European Performance of Buildings Directive. As per the standard, solar installations on buildings will now be mandatory across the European Union.

What is the EU solar standard?

From 2026, the EU Solar Standard will require solar rooftop installations across a significant proportion of Europe's building stock. The EU Solar Standard puts the power in citizens' hands and will enshrine the energy transition into the places where we sleep, work, and live.

What does the new EU solar law mean for buildings?

The new law is set to require solar installations on buildings across the European Union. This means that solar installations must be integrated into building works, and public bodies must retroactively install PV on their buildings, entering into force gradually from 2026.

Will a new solar system become a law in the EU?

Legislation that would require EU member states to integrate solar installations into future building works, and retroactively install PV on buildings, is one step closer to becoming law, after being approved by members of the European Parliament. Image: Markus Spiske, Unsplash
