Energy storage box fire protection system

 **LFP 12V 200Ah**

Overview

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations . Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression .

Are LFP batteries safe for energy storage?

Fire accidents in battery energy storage stations have also gradually increased, and the safety of energy storage has received more and more attention. This paper reviews the research progress on fire behavior and fire prevention strategies of LFP batteries for energy storage at the battery, pack and container levels.

What is a battery energy storage container (BESC)?

Battery clusters are connected in series or in parallel and equipped with supporting devices (such as current converters, fire extinguisher, etc.) to form the battery energy storage container (BESC) . Fig. 1. Schematic diagram of the battery energy storage system components.

Are lithium-ion battery energy storage systems fire safe?

With the advantages of high energy density, short response time and low economic cost, utility-scale lithium-ion battery energy storage systems are built and installed around the world. However, due to the thermal runaway characteristics of lithium-ion batteries, much more attention is attracted to the fire safety of battery energy storage systems.
