Environmental Comparison of 80kWh Foldable Containers in South Sudan

Overview

Can South Sudan electrify?

South Sudan is at a crossroads in terms of its ability to electrify the nation. Looking forward, the path toward clean, renewable energy is both cost-effective and environmentally conscious, resulting in increased energy security, sustainability and community resilience.

Can solar power solve energy poverty in South Sudan?

Because South Sudan is still in the beginning stages of their infrastructural development, there is a rare opportunity to move forward and address the issue of energy poverty by building sustainable models of electrification, like solar power, without having to dismantle an already existing energy foundation.

How does South Sudan produce energy?

Most of the country's current energy production comes from generators that burn imported diesel, a costly method both economically and environmentally. According to the World Bank, only 8.4% of the population had reliable access to power and electricity in 2022, leaving the door wide open to produce much-needed renewable energy in South Sudan.

Could off-grid expansion help regenerative agriculture in South Sudan?

Their holistic approach broadened regenerative agriculture over a 12-acre plot, co-designing projects with communities, installing solar-powered drip irrigation pumps, training and employing farmers and supporting distribution. Off-grid expansion could be a major step towards increasing access to and awareness of renewable energy in South Sudan.
