Garden Solar System

Overview

How much do garden solar panels cost?

The cost of garden solar panels will depend on the type of garden solar panels you choose. Ground-mounted solar panels are the most expensive option. A 10 panel system large enough to power an average three-bedroom house will cost around £7,026 to buy and install.

Can you use solar panels in a garden?

As you can see, there are lots of ways to use solar panels in a garden. You can get anything from small, affordable solar lights, to large ground-mounted solar panel systems that can power a house. Either way, using solar panels is a great way to save on electricity bills, and lower your carbon footprint in the process.

Which solar panels should you choose for your garden?

However, if space is limited, you can opt for smaller panels, such as portable solar panels, or even mini solar panels that power garden lights, all of which you can set up yourself. Solar panel pergolas are also something those with a modest amount of space should consider.

What can a solar garden do?

There are numerous small applications within the solar garden which may require more power than that supplied by a single PV panel or solar kit, such as water pumping for larger ponds or fountains, irrigation of the garden, multiple garden ponds, swimming pools or summer house lighting, etc. the list is endless.
