High-Temperature Resistant Energy Storage Containers from Southern Europe

Overview

What is Brenmiller Europe sensible heat storage?

Brenmiller Europe Sensible heat storage using crushed rock is a cost-effective solution for high-temperature heat storage. This system supports large-scale energy storage of 10–100+ GWh at an incremental cost of \$2–4/kWh, suitable for producing steam for electricity, hot water, or industrial hot air.

What is high-temperature energy storage?

In high-temperature TES, energy is stored at temperatures ranging from 100°C to above 500°C. High-temperature technologies can be used for short- or long-term storage, similar to low-temperature technologies, and they can also be categorised as sensible, latent and thermochemical storage of heat and cooling (Table 6.4).

What is a high temperature storage material?

The main technological innovation of the company relies on the developed high temperature storage material in the form of purposely produced pellets or bricks, with high heat capacity and thermal conductivity.

What is thermal energy storage?

Thermal Energy Storage (TES) technologies are emerging as a game-changing solution to decarbonize heat and balance energy supply & demand in intermittent conditions. Join us as we explore how these technologies are ready to scale, drive cost savings, and make net-zero production achievable.
