

# High efficiency inverter pure sine wave

50KW modular power converter

#### Flexible Configuration

- Modular Design, Expanding as Required
- Small&Light, Wall Mounted
- Installed in Parallel for Expansion

#### Powerful Function

- Support PV+ESS
- Grid Support, Equipped with SVG Technology
- On-Grid and Off-Grid Operation

#### Reliable Protection

- Outdoor IP65 Design
- Sufficient Protection Functions Equipped

## Overview

Should you use a pure sine wave inverter?

With a pure sine wave inverter, you can safely run and charge: Pure sine wave inverters produce stable power with low harmonic distortion you can safely use with medical equipment. Such clean power output buys you peace of mind knowing that your expensive devices are safe from power disruptions.

How much does a sine wave inverter cost?

\$100-\$500 range: This is what you're likely to pay for most pure sine wave inverters on the market. These usually generate between 1,000 and 2,000 watts, so you can use one to power appliances in your off-grid cabin, RV, or boat. \$500 and above: This kind of money will get you a heavy-duty inverter with a power capacity from 3,000 to 12,000 watts.

What is a modified sine wave inverter?

Contrary to pure sine wave inverters, modified sine wave inverters only attempt to mimic a sine wave, which can result in regular and bad disruptions to the grid and to your experience. On the other hand, pure sine wave inverters actually produce sine waves, which minimise disruptions, and maximise efficiency.

What is the best sine wave inverter?

This 600 watt pure sine wave inverter from GoWISE is one of the more affordable inverters on the market, and designed for use with smaller appliances. With a one year warranty, and the versatility afforded by its 3 AC output sockets (2 regular, 1 USB), it looks to be a pretty promising little unit.
