# Household solar lights on roof

**Low Voltage  
Lithium Battery**

**6000+** Cycle Life

## Overview

---

What is a rooftop solar panel for home?

A Rooftop Solar Panel for home refers to a solar power system installed on the roof of a residential building. It captures sunlight using photovoltaic (PV) cells and converts it into electricity for household use. These panels can be connected to the grid (on-grid), work independently (off-grid), or offer a hybrid setup.

Should you buy a rooftop solar panel for your home?

A rooftop solar panel for home is not just an energy upgrade—it's a lifestyle upgrade. It offers financial relief, energy independence, and a step toward sustainability. And thanks to falling prices and growing incentives, there's never been a better time to go solar.

Can solar panels be installed on a roof?

Yes, solar panels can be installed on most roof types, including asphalt, metal and tile. However, the installation method may vary. 2.

How do I know if my roof is suitable for solar?

Before installing solar panels, assess your roof to ensure it is suitable for solar installation. Start by examining the roof's condition. It should be sturdy and have at least 10-15 years to function. If the roof is damaged, consider repairing or replacing it to avoid complications later.
