How long do solar panels last

Overview

How long do solar panels last?

That means after 25 to 30 years, most high-quality panels will still generate around 85–90% of their original output. If your panels' output drops below the level promised in the warranty (for example, below 80% after 25 years), you may be entitled to a repair, replacement, or compensation.

How long do solar batteries last?

Solar batteries typically have 10-year warranties, which is around the time their performance begins to degrade. So after 10 years, you might need to replace them to maintain peak performance. If you purchase a battery, check with your battery manufacturer for their specific warranty.

Do solar panels expire?

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical damage from extreme weather conditions.

Do solar panels need to be replaced after 25 years?

After 25 years, your solar panels won't necessarily need to be replaced; however, their ability to absorb sunlight will be reduced. In this blog, we'll explain how long solar panels last, review solar panel degradation rates, and ways to make sure your solar panels last as long as possible.
