# How many independent

## Overview

How many independent variables can be manipulated at a time?

Generally, experiments are designed with one independent variable being manipulated at a time to clearly observe its effect on the dependent variable. However, there are situations where researchers may include two or more independent variables, especially in factorial designs, where the interaction between variables is also being studied.

How many independent variables can a study have?

In an Experiment, while the most common study has one independent variable and one dependent variable, it is also possible to have a different level of each variable. As a researcher, you may want to learn how a single Independent Variable can impact two different dependent variables. How many independent variable can you have?

.

What is the difference between number of independent variables and levels?

The number of independent variables in a study refers to the total number of factors being manipulated or measured to determine their effect on the dependent variable. On the other hand, the number of levels of independent variables refers to the different variations or conditions within each independent variable that are being tested.

How many independent variables are there in an experiment?

In practice, it is unusual for there to be more than three independent variables with more than two or three levels each. This is for at least two reasons: For one, the number of conditions can quickly become unmanageable. What are variables in an experiment?

A variable is anything that can change or be changed.

**Non-manipulated Independent Variables**  
**Non-Experimental Studies with Factorial Designs**  
In many factorial designs, one of the independent variables is a non-manipulated independent variable. The researcher measures it but does not manipulate it. The study by Schnall and colleagues is a good example. One independent variable was disgust, which the researchers manipulated by testing participants in a clean room or a messy room.
