# How much does the Berlin base station power module cost

## Overview

---

How much does electricity cost in Berlin?

For the average Berlin household with an annual energy consumption of 1,950 kilowatt-hours (kWh), this means an increase of around 18 percent, or approximately 3.60 euros per month. The grid fees are part of the electricity price and are levied in equal measure via the electricity rates of all suppliers active in Berlin.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much will the Berlin grid cost in 2024?

In concrete terms, this means that the grid fees for Berlin household customers in 2024 will continue to be made up of an unchanged annual standing charge of 39.70 euros and a sliding unit price of 11.11 cents per kilowatt-hour (previously 8.93 ct/kWh).

What is a battery energy storage system (BESS)?

BESS stands for Battery Energy Storage Systems, which store energy generated from renewable sources like solar or wind. The stored energy can then be used when demand is high, ensuring a stable and reliable energy supply.
