**I want to install an  
uninterruptible power supply at  
home**

## Overview

---

How can I extend my uninterrupted power supply system?

This guide will yield one scalable uninterrupted power supply system. You may extend it with power generation, or solar/wind/etc. as you see fit. Most uninterrupted power supplies sold for computers 'switch' power, running a small inverter when power is interrupted, then switching back to 'normal' power when it's back on.

How does an uninterrupted power supply work?

Most uninterrupted power supplies sold for computers 'switch' power, running a small inverter when power is interrupted, then switching back to 'normal' power when it's back on. This one simply produces AC power with a continuous duty inverter and assumes some system (s) will charge the DC battery supply it requires faster than it consumes it.

Can a ups be located outside?

The UPS can be located outside. Install an inside and outside outlet through a wall connected only to each other. You can plug the UPS inverter into the outside outlet (with a 'gender bender' extension cable) to power the inside outlet. Disconnect and isolate an indoor circuit from the main circuit breaker panel.

Should I install ups monitoring and management software on my computer?

If your UPS includes monitoring and management software, consider installing it on your computer. This software allows you to: Monitor the UPS's status in real time. Configure various settings for optimal performance. Receive notifications about power events or UPS-related issues, enhancing your ability to manage power backup effectively.
