How does a 20 watt solar panel work?

As the 20 watt solar panel receives the sunlight, the PV cells absorb the energy they receive. The cells transfer the energy absorbed by them to the semiconductor. It helps generate an electric field that produces voltage and current. Both voltage and current altogether deliver power. The power generated is measured in Watts.

How many solar panels are in a 20 KW installation?

A typical residential solar panels produces about 260 watts, so a 20 kW installation is made up of around 78 solar panels. If your solar panels are less efficient - say around 250 watts - that total goes up to 80 panels.
