# Land use nature of medium and large energy storage stations

## Overview

Are long-duration energy-storage technologies a stabilizer for new power systems?

Citation: Han M., Zheng K., Hu H., et al. (2025). Long-duration energy-storage technologies: A stabilizer for new power systems. *The Innovation Energy* 2:100077. Against the backdrop of realizing the target of “carbon peak and carbon neutrality”, renewable energy sources such as wind and solar power have developed rapidly.

Are large-scale energy storage systems feasible?

However, their high unit costs and limited storage capacities prevent them from addressing large-scale energy storage challenges [7, 8]. For long-term storage objectives, large-scale storage systems are the only feasible solution due to economic and practical considerations.

Can a liquid air energy storage system support regional energy storage demand?

Liquid air energy storage and innovative CAES-hydro combined technologies like Hydrostor share similar land footprint and deliverable size with Energy Vault, and thus could also support regional level inter-day storage demand but not seasonal due to idle loss.

Why do energy storage projects have a large energy rating?

Long-duration energy storage projects usually have large energy ratings, targeting different markets compared with many short duration energy storage projects. The large energy rating raises concerns about the footprint measured in m<sup>2</sup> /MWh.
