Madagascar Energy Storage Power Production Company

Overview

What is the energy situation in Madagascar?

Madagascar, an island nation in the Indian Ocean, has a limited energy production capacity primarily reliant on hydroelectric power and fossil fuels. As of 2022, only 36.1% of the population had access to electricity, highlighting significant challenges in energy infrastructure and distribution.

What are the main energy sources in Madagascar?

As of 2022, the primary energy sources for Madagascar were fossil fuels, hydroelectricity, biomass and waste, and solar power. Many individual households harvest wood for fuel, which has caused concerns over soil erosion, deforestation, and declining habitat for Madagascar's rich biodiversity.

How much electricity does Madagascar use?

According to the US Central Intelligence Agency's World Factbook, in 2022, Madagascar generated 663,000 kilowatt-hours and consumed about 2.248 billion kilowatt hours. JIRAMA oversees dozens of isolated power plants, which provide approximately one-third of Madagascar's electricity.

Is Jirama still a dominant energy source in Madagascar?

Despite reforms aimed at privatization and diversification of energy sources, JIRAMA continues to dominate the market. In terms of energy mix, Madagascar generated approximately 663,000 kilowatt-hours while consuming about 2.248 billion kilowatt-hours in 2022, with hydropower contributing 33.1% to the electricity supply.
