# Make an solar container outdoor power at home

### WORKING PRINCIPLE

## Overview

---

Can you put solar power in a shipping container?

There are many ways to skin a cat, and even more ways to add solar power to a shipping container. To be fair, I cheated a bit. Well, not really cheated, but I just went with a retail solar generator system instead of DIYing that part myself from à la carte components.

How do I build an off-grid solar power system?

Start small. Test your setup with just one panel and a battery. Monitor how much power you're using and how quickly your battery charges. From there, you can expand your system with more panels or batteries as needed. Building your own off-grid solar power system can feel intimidating—but with the right info, it's totally doable.

Can you build your own Solar System?

Whether you're preparing for a more sustainable lifestyle, reducing your reliance on the grid, or just powering a cabin or van, building your own solar system can be incredibly rewarding. In this guide, we'll walk through the entire process, step by step, with clear language and practical tips—no electrical engineering degree required.

How much power does a DIY solar system use?

This isn't our first rodeo - we have a similar install video of our much larger, more complicated DIY solar system - it has 10kw of solar, 28kwh of lithium battery storage, and 5000w of 120V AC power. We'll be referring to this project a lot as it informed a lot of the decisions we've made for this system.
