Overview

How will a floating offshore wind farm benefit Malta?

The floating offshore wind farm will play a key role in enhancing Malta's renewable energy mix, complementing the island's robust solar power infrastructure, while supporting the country's commitment to the EU's net zero carbon economy goal by 2050.

What is the Malta PHES energy storage system?

The Malta PHES energy storage system is built upon well-established principles in thermodynamics and uses conventional components that have been present in power plants for hundreds of years. Electricity from the grid is used to heat molten salt and cool a chilled liquid. In these forms, energy can be efficiently stored for long durations.

What is the potential of wind energy in Malta?

According to the EU fact sheet in January 2007 the potential of wind energy in Malta is substantial. In 2010 the investment subsidy of 25% was available for private consumers for wind power up to 3.7 kW (urban wind turbines). Excess electricity fed into the grid was purchased at EUR 0.07 per kWh.

Is solar power growing in Malta?

Power generation from photovoltaic (PV) solar cells is increasing in Malta, with total kWp (kilowatt peak) capacity growing by 16.9% from 2017 to 2018. Domestic rooftop installations account for the overwhelming majority of PV installations, and hold 52.1% of total kWp capacity.
