

NKOSITHANDILEB SOLAR

Manila Outdoor Power Company

Overview

How much solar power does Manila Water have?

With this physical installation, Manila Water's total solar installed capacity now stands at 6.3MWp, including the 2.5MWp Phase 1 Solar earlier this year.

How will consolidated solar capacity impact Manila Water?

The consolidated solar capacity is expected to offset 5% of the annual energy demand and to generate significant energy savings and contribute to Manila Water's broader sustainability targets, reinforcing its commitment to a greener and more resilient future.

Why is the Philippines a good place to buy solar power?

This stability is critical for securing long-term power purchase agreements and attracting investment. The Philippines, as an archipelago, presents diverse renewable energy resource profiles across its islands. Some regions are better suited for solar power, while others possess abundant geothermal resources or strong wind patterns.

Why should a company have a solar presence in Luzon & Visayas?

A company with a solar presence in Luzon and a wind presence in Visayas exemplifies this approach, maximizing overall resource utilization. The renewable energy sector is characterized by rapid technological advancements, leading to increased efficiency and reduced costs for various renewable energy technologies.
