New solar container outdoor power in Osaka Japan

Overview

ENEOS Renewable Energy commissioned the 18MWAC/22.9MWDC Osaka Mega Solar Power Plant in Takaishi Town, Osaka Prefecture, on Janu, with an expected annual generation of 30.3GWh. Can solar energy be used in Japan?

To maximize the use of solar energy and overcome those drawbacks, two promising technologies have been developed: space-based solar power (SBSP) and next-generation flexible solar cells. Japan is making steady progress toward the practical implementation of both.

Can Japan harness the potential of solar power?

Japan's efforts to harness the potential of solar power, a well-known renewable energy source, will shine a light on humanity's future. Japan is making steady progress toward the implementation of the groundbreaking technologies of both space-based solar power and flexible solar cells.

How many MW of electricity will Osaka Titanium have?

The plants, totaling 10 MW (AC) of capacity, will be developed and operated by Sojitz and its Sojitz Mirai Power subsidiary, with electricity to begin flowing to Osaka Titanium's Amagasaki plant in October 2025.

Why is Japan a good place to build a solar power station?

Japan also has strong enough capabilities in satellite system design to maximize power generation efficiency and accurately transmit power to the ground. Professor SHINOHARA Naoki of Kyoto University's Research Institute for Sustainable Humanosphere specializes in wireless power transmission, space solar power stations, and microwave processing.
