Niger Uninterruptible Power Supply Manufacturing Plant

GRADE A BATTERY

LiFepo4 battery will not burn when overcharged over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

Overview

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

Why do you need an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

Who manages power plants in Niger?

These plants are managed by generation companies (GenCos), independent power providers, and Niger Delta Holding Company. The primary independent power plants before the power sector reforms are Shell-owned Afam VI (642MW), Agip-built Okpai plant (480 MW), and AES (270 MW).

Are battery-backed uninterruptible power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptible power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.
