# Portable power source that can be used for electrical appliances

## Overview

---

What appliances can a portable power station run?

Typically, most portable power stations can run small household appliances and electronic devices such as radios, stereos, coffee makers, laptops, LED lights, and even TVs. To determine what appliances your portable power station can run, you need to understand two key specifications: watt-hours (Wh) and power requirements (watts).

What devices can you plug into a portable power station?

You can plug a wide variety of devices into a portable power station, depending on its capacity and output options. Common devices include smartphones, tablets, laptops, LED lights, small fans, mini refrigerators, and portable speakers.

What is a portable power station?

A portable power station is a rechargeable, battery-powered unit with applications in electrical powering on-the-go or during emergencies and power outages.

What devices can a power station run?

Common devices include smartphones, tablets, laptops, LED lights, small fans, mini refrigerators, and portable speakers. Larger power stations can also run appliances like electric grills, power tools, TVs, and even some medical devices like CPAP machines.
