## Overview

---

What are the applications of a primary battery system?

The panel participants identified the major applications for these systems as: Load leveling in electric power generation (including emergency storage). Traction applications. Portable power supplies. Annual production of primary batteries is currently 16 billion, and the market is growing at 5-10 percent annually.

Who makes portable power units?

Japanese and Korean companies are the most involved in portable power units for electronic devices, and have recently launched a series of products that are mainly based on direct methanol-fuelled PEFC; large-scale commercialization of these devices is planned in the coming years.

Can a supercapacitor be used as a rechargeable power source?

For moderate energy demands in portable electronics, supercapacitors are suitable as rechargeable stand-alone power sources. In conjunction with rechargeable batteries in uninterruptible power supplies, supercapacitors can handle short interruptions and can extend battery life.

Can methanol fuel cells be used as a power supply?

Mainly fuel cells operating on methanol are currently tested for the purpose of man- portable power supply by the different armies. The French and US armies, however, are also considering hydrogen-fed proton-exchange membrane fuel cell (PEMFC) systems.
