San Jose Base Station Battery Plant

Overview

What happened at San Jose's largest battery energy storage facility?

Images: inset photo, Burns & McDonnell; larger photo: Guy Churchward licensed under Creative Commons 2-0 As a major fire abated near San Jose, Calif., that ravaged one of the world's largest battery energy storage facilities, investigators have begun an onsite probe of the cause.

Are battery storage plants safe in California?

The fire raised major questions across California and the nation about the safety of battery storage plants. California has been approving hundreds of new storage plants each year since 2020 because they are key to expanding the state's renewable electricity supply by storing solar power in the daytime and releasing it on the power grid at night.

What happened at Moss Landing's largest battery storage plant?

(Shmuel Thaler - Santa Cruz Sentinel) Getting your Trinity Audio player ready. A major fire in January at one of the world's largest battery storage plants in Moss Landing showered 55,000 pounds of toxic metals across the landscape within a mile of the plant, a new scientific study has found.

How will South County's New battery storage facility differ from Moss Landing?

The safety features and design of the battery storage facility proposed for South County are different from the Moss Landing battery facility, said Max Christian, project lead for New Leaf Energy. The batteries will be stored in steel containers that will have heat monitoring and fire suppression systems, he said.
