## Overview

---

Why are Chinese solar manufacturers rethinking export strategies?

Solar cells accounted for roughly 28% of all U.S. solar imports since the first round of tariffs, compared with 6.5% in 2023, the data showed. Chinese manufacturers are already revising export strategies due to concerns about tariffs on Indonesia and Laos, said Fei Chen, solar research analyst at consultancy Rystad Energy.

Why is Southeast Asia a top exporter of solar power equipment?

In little over a decade, Southeast Asia has become one of the world's top exporters of solar power equipment – a success driven significantly by the relocation of Chinese manufacturers to the region. But now, the sector faces considerable challenges as US tariffs cut off their main export market, intensifying pressure on a previously booming trade.

What did Seia officials say about solar tariffs?

SEIA officials were not immediately available for comment. US trade officials finalized steep tariff levels on most solar cells from Southeast Asia, a key step toward wrapping up a year-old trade case in which American manufacturers accused Chinese companies of flooding the market with unfairly cheap goods.

Are Chinese solar panels flooding the market?
