# **Singapore Leaf Energy Storage Power Station Project**

## Overview

---

What is Singapore's biggest battery storage project?

Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia. The opening was hosted by the 200MW/285MWh battery energy storage system (BESS) project's developer Sembcorp, together with Singapore's Energy Market Authority (EMA).

Why is Singapore deploying energy storage systems?

Singapore has been deploying energy storage systems (ESS) to enhance power grid stability in support of greater sustainability. Situated just one degree north of the equator, Singapore enjoys abundant sunshine throughout the year. It is no wonder that solar is the most promising domestic renewable energy source for Singapore.

What is Singapore's first utility-scale energy storage system?

Singapore's launch of its first utility-scale Energy Storage System represents a landmark step towards sustainability and improved energy resilience. Developed by the Energy Market Authority (EMA) and SP Group, this project features two test-bed installations with a total storage capacity of 4.4 MWh, sufficient to power hundreds of homes for a day.

How much energy storage will Singapore have by 2025?

With just one project, EMA has achieved and exceeded Singapore's deployment target of 200MWh of energy storage by 2025. The target was set as part of the EMA programme, Accelerating Energy Storage Access for Singapore (ACCESS), through which the EOI solicitation was held.
