# **Singapore Smart Source Lithium Energy Storage Charging**

## Overview

---

What is Singapore's biggest battery storage project?

Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia. The opening was hosted by the 200MW/285MWh battery energy storage system (BESS) project's developer Sembcorp, together with Singapore's Energy Market Authority (EMA).

Where are shell EV charging stations located in Singapore?

2 Three Shell service stations located in Tampines, Pasir Ris, and Lakeview will provide electric vehicle (EV) charging using 100% certified renewable energy, including energy from the solar panels at the rooftops of these stations and other Shell rooftops across Singapore.

Does Singapore need energy storage systems to manage solar intermittency?

However, the minister said there is a need to "step up energy storage systems to manage solar intermittency." Talks are currently ongoing with Sembcorp, the engineering conglomerate behind the 200MW/285MWh battery energy storage system (BESS) installation on Singapore's Jurong Island.

How EV charging is transforming Singapore's Energy Transition?

By integrating the EV chargers with the BESS and renewable energy from the rooftop solar PV system, Shell can alleviate the constraints of the electrical grid, and deploy more high-powered EV charging points to support Singapore's energy transition. Drivers also enjoy more choices when it comes to smart charging and decarbonisation.
