Skopje backup ups uninterruptible power supply price

Overview

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a device that's easy to install and provides power to computers, servers, server rooms, and data centres during main energy failures, electrical surges, or unexpected power cutoffs.

What is a standby UPS?

Standby UPS: A system where, normally, AC input (utility power) is connected to devices and when a power outage or abnormal voltage is detected, the inverter starts feeding the device using power from the batteries. In the event of a power outage, a few milliseconds of momentary break occur in AC output.

What is online UPS & how does it work?

Online UPS: A system of supplying power by converting AC input (utility power) to DC and reconvert it to stable AC by the inverter while constantly charging the batteries. Supplies power without momentary power breaks in the event of a power outage.

How do I choose the right UPS system?

UPS systems support 24/7 operation, preventing any power loss that could compromise security activities. Selecting the right UPS system involves assessing power needs, calculating the total watts required, and determining the necessary runtime to sustain operations during outages.
