Solar Panel Inverter Gateway

Overview

What is a solar gateway & how does it work?

The gateway disconnects your home from the grid during an outage, protecting both your home and utility workers. Whereas other solar systems, simply supply an Emergency Power Supply limited by the size and capabilities of the installed Solar Inverter, a solar gateway offers full home back up for complete peace of mind and energy independence.

What is the KNX gateway for SolarEdge inverters?

The KNX gateway for SMA SUNNY BOY / SUNNY TRIPOWER inverters provides a simple solution to transfer all relevant data from the inverters to KNX. The KNX gateway for SolarEdge inverters provides a simple solution to transfer all relevant data from the inverters to KNX. Great product and support !.

What types of data does a microinverter gateway collect?

There are several different versions of the gateway as pictured below. The gateway periodically collects production data from your microinverters, and your production meter, if you have a production meter installed. (The gateway also collects energy usage data, if you have optional consumption metering installed.).

How does a gateway communicate with a microinverter?

The gateway communicates with the other hardware in your system over your home's electrical wiring; this is called powerline communications. There is no wireless communication between the gateway and your microinverters or your Enphase storage solution.
