## Overview

What is a solar generator?

A solar generator is a portable battery storage system powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

What is a solar hydrogen generator?

A solar hydrogen generator is a hybrid of two systems: solar panels and a hydrogen fuel cell generator. The solar panels generate electricity and send DC power to an inverter. This inverter then converts the power to AC power, which can be used by a homeowner or business owner if they have a generator installed.

Can solar energy be used for energy storage?

Solar power can be used to create new fuels that can be stored and later used to provide energy. Existing compressed air energy storage systems often use the released air as part of a natural gas power cycle to produce electricity.

What is energy storage?

Energy storage is a system that can help more effectively integrate solar into the energy landscape. Sometimes it is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone.
