Solar module exports slow down

Overview

How many GW of modules did China Export in November 2024?

China exported 15.2 GW of modules in November 2024, down 12% MoM from 17.34 GW and down 14% YoY from 17.71 GW, according to InfoLink's customs data. China exported 219.31 GW of modules from January to November 2024, up 14% YoY from 191.81 GW.

How to reduce solar export?

It's a great feature that can help you get a better return on your solar and electric vehicles investments. Another way to overcome limiting solar export is by installing a solar battery. It is similar to the EV charger since the battery also stores excess energy during peak hours for later use.

Which countries import Chinese modules in 2024?

China exported 219.31 GW of modules from January to November 2024, up 14% YoY from 191.81 GW. In November 2024, the top five largest markets importing Chinese modules were, in order, Brazil, the Netherlands, Pakistan, Saudi Arabia, and Spain, with monthly imports making up 41% of the global total.

How much Chinese module imports did Pakistan import in November 2024?

In November 2024, Pakistan led the Asia-Pacific market in Chinese module imports, reaching 1.12 GW, up 334% MoM from 0.26 GW, making up 22% of the region's total imports. From January to November 2024, Pakistan imported 15.97 GW of Chinese modules. The surge in November imports primarily compensated for the volume gaps from September and October.
