Solar onsite energy not working

Overview

These may include things like low or uneven charging, excess heat from poor airflow, loose wiring, aging components, shading on panels, or incorrect charge controller settings. Why is my solar system not working?

There are two failure modes which the solar system maybe experience. These two conditions which may require troubleshooting are: Zero output is a common problem and in nine out of ten cases, it is due to a faulty inverter or charge controller. It's also possible that one solar panel in your pv array failed.

What happens if a solar panel system is not installed properly?

If your solar panel system is not properly installed, it may cause problems in the future. For example, the system may not be operating correctly, meaning it won't produce as much energy as it should.

How to troubleshoot a solar system?

Below is a list of a few things to keep in mind while troubleshooting solar systems. Wear protective gear, such as non-slip shoes, goggles, a helmet, safety gloves, and other similar equipment. Always use insulated tools while working with electrical wires. Ensure to turn off the solar system before starting troubleshooting.

What should I do if my solar panel is not working?

Solution: Inspect for overgrown tree branches or plants. If you find them, trim them immediately. Look for bird droppings, debris, dust, dirt, and tree leaves covering your panels' surface. Use a soft cloth and lukewarm water to clean solar panels. 2. Inverter Issues An inverter is also the key component of your solar system.
