Solar panel life and price

Overview

How much do solar panels cost?

Solar panels themselves usually cost between \$0.70 to \$1.50 per watt, depending on their efficiency and brand. For an average 6kW system, expect to spend \$4,200-\$9,000 on panels alone. Inverters are another significant component, ranging from \$1,000 to \$2,500 for string inverters, or \$150-\$200 per microinverter.

How long do solar panels last?

Solar panels are built to last, but like any energy-producing equipment, their performance naturally decreases over time. Most quality solar panels degrade at a rate of only 0.5% to 0.8% per year, meaning they'll still operate at about 85-90% of their original efficiency after 20 years of service.

How can I extend the lifespan of my solar panels?

Here are some tips that can help you extend the lifespan of your solar panels: Investing in a high-quality solar photovoltaic system from a reputable manufacturer like FusionSolar is the first step toward ensuring long-term performance and durability.

Are solar panels a good investment?

Areas with higher electricity costs typically see greater financial benefits from solar installation. Additionally, as utility rates continue to rise (historically about 2.2% annually), your savings can increase over time, making solar panels an effective hedge against future energy cost increases.
