What is a solar roof?

A solar roof or rooftop photovoltaic (PV) system is a setup where electricity-generating solar panels are mounted on the roof, utilizing the prime exposure of the rooftop to sunlight and creating one of the most environmentally friendly roofs possible.

What are solar shingles?

Also known as solar roofs, solar tiles, or solar roof tiles, solar shingles are tile-shaped panels permanently installed on your home's roof. They have the appearance of traditional roof tiles, just like traditional solar panels, solar shingles are equipped with photovoltaic (PV) cells that capture sunlight and convert it into electricity.

How are solar tiles installed?

Installing solar tiles roofs follow a process similar to installing solar panel roofs, but there are distinct differences: Solar panels are mounted directly onto brackets or frames without altering the existing roof material, whereas solar tiles require fitting onto the roof and sealing.

How do in-roof solar panels work?

Just like traditional solar panels, in-roof versions use photovoltaic cells to turn sunlight into electricity. The big plus?

They integrate smoothly into your roof during construction or when you're replacing an old roof, avoiding the visual clutter of typical installations.
