# Solar panels and lithium batteries matching

## Overview

---

### How to match solar panels with batteries?

If you need 30 kWh daily and want 2 days of autonomy, then you need a battery with a minimum capacity of 60 kWh. Choose battery types that match your system's voltage and charging requirements to ensure compatibility. By following these steps, you can effectively match solar panels with batteries to optimize your energy system.

### Are LG Energy Solution batteries compatible with solar panels?

LG Energy Solution produces battery storage solutions compatible with various solar systems. Compatibility Notes: LG Energy Solution batteries (e.g., RESU series) can be paired with many solar panel brands using compatible hybrid inverters. Their batteries work with a wide range of solar systems.

### Are solar panels compatible with battery storage?

The compatibility between solar panels and battery storage depends on various factors, including your solar panel specifications, battery type, inverter technology, and system architecture. Understanding these factors is essential for creating an efficient and reliable solar-plus-storage system that meets your energy needs.

### Are solar energy management systems compatible with solar inverter & battery systems?

The energy management system must be compatible with the solar inverter and battery system. Solar panel capacity should be matched with typical daily energy consumption and battery storage capacity. These advanced systems allow homeowners to participate in grid services by aggregating their solar and battery resources. Compatibility Considerations:
